Conducted disturbance test generator acc. to IEC / EN 61000-4-6:2014

The test generator generates interferences as defined in IEC / EN 61000-4-6 - Immunity to conducted disturbances, induced by radio-frequency fields. The standard described a test setup, in which can influence these high-frequency interferences without a complicated structure with antennas, field instrumentation and shielded rooms on a EUT. Via coupling networks and coupling clamp's sine waves are induced directly into power and signal lines. The EUT keeps its usual place in the installation; the complete unit can be tested in its function.

Overview:

- Computer-based system (controlled by USB).
- Self-calibration of the test system (generator and CDN)
- RF-generator, amplifier and RF-voltmeter may as well be used as stand-alone devices
- Connections: EUT "Fail", EUT monitoring by external multimeter, e.g. DUT signal
- Calibration of coupling / decoupling devices and EM clamp is performed automatically
- Extensive additions like attenuators, calibration kits, etc. deliverable.
- Directional Coupler (DC)

A directional coupler is used to measure and control the forward power of the amplifier – see the standard IEC / EN 61000-4-6, 2014. The quality of the built-in amplifier allows control of the level data through the system - see chapter 6.4 in the standard with respect of two methods. That means a built-in directional coupler is in our test system not (necessarily) required. It can also be retrofitted. Or an external directional coupler can connect - see also following selection table.

However, the control on the forward power during a test is the preferred method.

This means a generator with built-in directional couplers meets the requirements of the standard and the auditors. There are no discussions on the procedure.

CDN USB 3.0	
CDN USB-C / USB-P	
CDN HDMI	
CDN Firewire	
CDN D 100	100 Ohm Resistor for direct coupling on the screen, with alligator clip

CDN Calibration-Set

- Mounting plate: **CDG A 3100**
(includes 50 / 150 Ohm passage)
- Calibration-Adaptor: **CDG A 31xx**

CDN EMCL-20 and CDN EMCL-35

EM-Coupling clamp, cables Ø < 20mm or < 35mm

- Includes calibration kit and factory calibration
- With matching network (Option) from 10 kHz at EMCL-20 (**CDN-EMCL-NW_10**)

CDN ABCL-20 (Decoupling clamp)

For cable Ø < 20mm

- for additional decoupling at immunity testing according to IEC / EN 61000-4-6

CDG 6050 / CDG 6050-100

- 6dB Attenuator, 20W, Test level max. 15V
- 6dB Attenuator, 100W, Test level max. 40V
- 30 dB Attenuator, 50W, N-Connector

CDG A 50 / CDG A 50-10W / CDG A 50-50W

- BNC Termination, 50 Ω, 1W
- BNC Termination, 50 Ω, 10W
- BNC Termination, 50 Ω, 50W

CDN BCI-P1 / CDG CMP-45 and CDG CMP-46

- Clamp for Bulk Current Injection (BCI) test
- Current monitoring probe 10 kHz – 400 MHz, foldable and non-foldable
