Is Your Radio Mission Ready?

You study...

You train...

You prepare for the unthinkable...

But the unthinkable could happen anytime, anywhere. All the studying and training has prepared you to handle critical, life-threatening situations, but when time is of the essence and communication with your team is at its most important, will your radio work? Can you talk to other First Responders who without a second thought thrust themselves into harm's way?

Our Mission Test System allows you to run a quick operational check on your radio to ensure that it will function properly while you are in the field. In under a minute, the Mission Test System does an operational check on your radio before you start your shift for the day. That could make all the difference in your ability to communicate in a time of need.

The Mission Test System is comprised of a high-end RF test and measurement instrument which runs the automated test executive, an RF chamber for isolation and an RF Antenna Coupler. Connect the mic test cable, slide the antenna coupler over the antenna, and you're ready to test. The Mission Test System was designed for ease of use for the First Responder - short test times, simple set-up, easy one button execution for Automated Testing, with easy to understand test results.

- Easy to Understand Results: **PASS** **FAIL**
- Easy Operation: One Touch Is All You Need
- Sold as a Full System or Accessory Kit

Part No. 2035FL, Issue 1, 02/18
